

Founder contribution and provenance

A concise record of product direction, implementation ownership and transparent asset provenance.

APPLICANT Jacob Sanjay | PRODUCT Desk 42 | EVIDENCE DATE 19 July 2026 | CONTEXT UK Innovator Founder

PURPOSE

Demonstrate direct founder contribution to a playable, differentiated product - from visual direction and interaction grammar to Unity implementation, testing and artist handoff.

FIGURE 1. Desk 42 main menu captured from the verified Windows player build. The desk, dossier and claimant encounter form one coherent product stage.

APPLICANT CONTRIBUTION

- Defined the desk-facing composition and interaction grammar
- Directed claimant and office-equipment requirements
- Implemented Unity UI, sprites, states and layout
- Built repeatable build, capture and test workflows

TRANSPARENT PROVENANCE

AI-assisted imagery is used as placeholder art, not represented as final commissioned artwork. The applicant's contribution is creative direction, product decisions, technical implementation, integration and validation. Final production art is intended for commissioned artist delivery.

From approved composition to running product

A traceable comparison between the locked encounter layout and the playable Unity implementation.

EVIDENCE CLAIM

The desk-facing composition is no longer a disconnected concept image: its claimant seat, dossier zone, decision cards and action controls are represented in a working Windows player build.

FIGURE 2. Approved composition (left) and actual Windows player capture (right), presented at the same 1920 x 1080 product viewport.

01 COHERENT STAGE

Claimant sits across the desk. Dossier, response cards and action controls occupy fixed, legible zones.

02 RUNTIME WIRING

Unity scenes use a runtime portrait catalogue, state-specific claimant visuals and point-filtered sprite imports.

03 VERIFIED BUILD

Windows player built successfully. .NET build succeeded. Unity EditMode: 120 passed, 0 failed, 1 skipped.

Delivery, handoff and corroboration

What exists now, what the production artist receives, and what should accompany this exhibit.

CURRENT POSITION

The build provides a coherent playable shell and an explicit replacement contract for final art. It is evidence of execution; business-plan, market and independent corroboration remain separate requirements.

FIGURE 3. Internal Audit screen from the verified Windows player build.

DELIVERABLES CREATED

- Locked desk and client-facing composition
- Non-human claimant roster and state set
- Office-equipment placeholders
- Unity-ready sprite imports and editor wiring
- Artist handoff grammar

ATTACH ALONGSIDE THIS EXHIBIT

- Dated Git history and repository ownership
- Playable build and versioned release
- Artist agreement, invoice or confirmation
- Playtest evidence or user feedback
- Business plan, market evidence and scaling plan
